PROFESSIONAL SUMMARY

Backend and systems-focused software engineering student specializing in scalable distributed systems, real-time architectures, and AI-powered platforms. Experienced in building production-style backend systems using Kafka, Redis, Docker, PostgreSQL, and modern cloud-native engineering practices. Passionate about system design, concurrent processing, and AI infrastructure, with hands-on experience in open-source collaboration, competitive programming, and high-performance backend development.

TECHNICAL SKILLS

Programming Languages | C++, Java, Python, JavaScript, TypeScript

Backend & Distributed Systems | Node.js, Express.js, Spring Boot, FastAPI, Kafka, WebSockets, REST APIs

Frontend | React.js, Next.js, HTML5, CSS3, Tailwind CSS

Databases | PostgreSQL, MongoDB, Redis

Developer Tools & Infrastructure | Docker, Git, GitHub Actions, Prometheus, Kubernetes, Linux

Computer Science Fundamentals | Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, System Design

EXPERIENCE

AIML Intern

Dec 2025 - Feb 2026

Infosys Springboard

- Built and optimized machine learning pipelines for NLP-based tasks on datasets containing 50K+ records using Python and AI/ML workflows.
- Improved model accuracy by approximately 18–25% through data preprocessing, feature engineering, and hyperparameter tuning.
- Reduced data processing time by nearly 30% by optimizing data transformation and model inference workflows.
- Designed end-to-end ML pipelines focused on scalability, reliability, and efficient model deployment.

Open Source Contributor (GSoC)

May 2025 - Aug 2025

Rocket.Chat

- Contributed to a production-scale communication platform used by millions of users, focusing on backend performance, reliability, and feature enhancements.
- Reduced request latency by approximately 15–20% by optimizing critical backend workflows and resolving system bottlenecks.
- Fixed 20+ issues across core platform modules, improving system stability, maintainability, and production reliability.
- Participated in code reviews and collaborated with global maintainers following industry-standard open-source development practices.

FEATURED PROJECTS

Distributed Code Execution & Evaluation Engine | PostgreSQL, Kubernetes, Node.js, C++

[Source Code](#)

- Built a distributed, event-driven code execution platform capable of securely executing untrusted multi-language code using Docker sandboxing and Kafka-based orchestration.
- Designed scalable worker-based architecture handling concurrent execution requests with asynchronous job scheduling and automated evaluation workflows.
- Reduced result retrieval latency by approximately 35% through Redis-backed caching and optimized execution pipeline design.
- Improved execution reliability and isolation by implementing resource constraints, rate limiting, and AI-assisted security validation workflows.

Marneni Anil Chiranjeeth

+91 8328576119 | anilmarneni30@gmail.com | [LinkedIn](#) | [GitHub](#) | Portfolio | [LeetCode](#)

- Integrated Prometheus-based monitoring, structured logging, and containerized deployment workflows using Docker Compose and Kubernetes.

Real-Time Chat System | WebSockets, Redis, Kafka, PostgreSQL, Node.js, React

[Source Code](#)

- Developed a scalable real-time messaging platform supporting 1:1 and group communication using WebSockets, Redis Pub/Sub, and Kafka event streaming.
- Engineered distributed messaging workflows with message persistence, delivery guarantees, online presence tracking, and fault-tolerant communication pipelines.
- Improved real-time message delivery performance by nearly 25% through asynchronous event-driven processing and Redis-based shared state management.
- Designed horizontally scalable backend architecture optimized for low-latency communication and concurrent user workloads.

Smart Task Manager with AI Integration | Node.js, Redis, PostgreSQL, OpenAI API, React

[Source Code](#)

- Built an AI-powered productivity platform enabling natural language task creation, intelligent prioritization, and automated scheduling workflows.
- Integrated LLM-based task parsing and AI-driven task breakdown pipelines using asynchronous workers and Redis-backed job queues.
- Reduced task scheduling overhead by approximately 30% through automated prioritization workflows and asynchronous background processing.
- Designed scalable backend services with adaptive reminders, modular AI orchestration, and real-time workflow management capabilities.

EDUCATION

BTech in Artificial Intelligence and Data Science

Sep 2023 – Apr 2027

Vignan Institute of Technology and Science

CGPA: 8.886

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks

ACHIEVEMENTS

- Solved 215+ Data Structures and Algorithms problems on LeetCode with strong focus on Dynamic Programming, Graphs, and Backend-Oriented Problem Solving.
- Achieved LeetCode Contest Rating of 1488 with global ranking within the top 48.13% among competitive participants.
- Participated in major hackathons including Smart India Hackathon (SIH), Adobe India Hackathon, GDG Hackathons, Summer SaaS Hackathon, VHACK 2026, and Krithiathon 3.0.
- Contributed to open-source engineering projects through Rocket.Chat, collaborating on production-scale communication systems and backend workflows.
- Maintained active GitHub contributions across distributed systems, real-time architectures, AI-powered platforms, and backend infrastructure projects.

CERTIFICATIONS

- Programming in Java — NPTEL
- Infosys Springboard AIML Internship
- Introduction to Artificial Intelligence
- Deep Learning for Developers
- Prompt Engineering
- Generative AI Unleashing
